I don't have any C-10's so you get the 60. I do load my own if I could find cheap cases (cost) each. I bought these tapes "Wards" for 25¢ each.

I Tested the tape on my "Columbia" CRA-200 and it worked fine. I hope you don't have a problem loading.

Full of unknown steps ?

Please listen for "Narration" Before the 3 taped programs

PS

The above program will store [illegible] name, Home Address, Phone, Birthdate, and most any other bits of information that you wish to keep on tape. It helps eliminate all the little scraps of paper that you may have floating around with good, but little used numbers.

To use press Run Go and the Bally will ask Index. You press # on and the Bally will start scroll entry at that memory location (Index address) You now type in Name and birthdate press Go. This scrolls your entry, you now enter the mailing address press Enter the Zip and phone # press Run and the screen prints a number like 30. This is your memory location (Index address) for the next person.

In other words, you have just entered 3 names data into memory locations 0 to 30.

To recall use Go** 12 Go. The Bally will ask "Listen" and you use the index address of whomever you seek. You can start at 0 to view the entire contents. To find a record of your entries. Tom Jones #34, you can go right to the one you want.

Line 2 contains the "Quick Erase" Eliminate the period and press Goto 2 Go. You may eliminate all lines except 3 and 10 for more memory space. Enter line 12 only when you need data to make prevent prying eyes from seeing #4. You can also put Call 1000 on line 4 to keep others from running your program. (It bombs the program and all contents. Then eliminate line 8 before using it.

When Listing, if you see ?????????? etc.. it simply means that those memory locations are empty. You must re-record all NEW entries to tape.

There are other ways to utilize this program effectively. I hope that I succeed, again giving you some inspiration to do so.

AUTO SEARCH and AUTO LIST, M. Skaggs, 1-5-83

To search a tape visually for a program enter with no line # For Zeu To 9499: Print:Next Z press Go and turn on your tape player with the volume set to proper level of playback. Sit back and watch for the program that appeals to you. Press Halt Run Go.

To use line 1000 N=0:S=24:Clear:Input "Line?";N: list N for Auto List. Press auto 1000 when ready to debug. Erase line 1000 when you are done with it. Set S=0 on line 1 until your program's done. Press any key to list new stuff. (except Halt)

P.P.S. These documents are kept sensitive. Also I am moving soon. More later

Please Refer to earlier letter concerning the Sound for "Nam". Programmed on tape, Question: why will computer take "4" Pieces Sometimes on Level 3?
